

Lambda Technologies is looking for a technician to help build, test, and support industrial microwave heating systems. We need a flexible team-oriented individual. We've listed a broad range of skills that we could use. While we know that no one candidate may be capable of doing it all, please don't hesitate to respond. We want to see if you can be a good fit based on your individual experience and skills.

- a) Participate in system assembly and debug
  - Equipment assembly - frame and rack mounted components
  - Precision assembly and alignment of small electro-mechanical assemblies
  - Electrical wiring from schematics and soldering (certification a plus)
  - PCB test and debug
  - Computer configuration
  - Temperature sensor setup and testing
  - Microwave or high frequency component calibration and test
  
- b) Contribute to QC testing and continuous improvement
  - Final assembly testing using documentation for established systems
  - Final assembly testing for new systems - documentation does not yet exist
  - Testing to isolate problems and potential solutions
  - Working with vendors to implement fixes
  - Documentation improvements
  
- c) Assistance with technical support
  - E-mail and telephone support of customer calls
  - Customer training at Lambda
  - Opportunities for US and International travel to customer sites for equipment installation, repair, and upgrades (US passport required)

Candidates should be able to show examples to illustrate their work experience including pictures of finished products or subassemblies. There are opportunities to advance to positions in Field Service/Training as well as engineering.
